ABOUT BIZPOLE PAY

01

One branded interface for business payments

Bizpole Pay is a proposed multi-merchant platform that enables businesses to manage customer payments and, over time, their broader financial operations through one branded interface.

The initial release focuses on merchant onboarding, payment collection, payment links, transaction tracking, refunds and reporting, using supported payment partner integrations.

PRODUCT VISION

Help businesses manage incoming and outgoing money with less manual work, better visibility and stronger financial controls.

PRODUCT SCOPE

02

Where we start, and where we are going

Initial release

Built on supported payment partner integrations

01 **Merchant onboarding** Bring businesses onto the platform.	02 **Payment collection** Accept customer payments online.	03 **Payment links** Collect payments through shareable links.
04 **Transaction tracking** Successful, failed and pending payments.	05 **Refunds** Initiate and track refunds.	06 **Reporting** Transaction and settlement reporting.

Future releases

May include

Payout workflows · Vendor payments · Invoice management · Expenses · Reimbursements · Approval workflows · Accounting integrations

Why we need a payment partner

01 Authorised processing
Collecting and settling payments for merchants must be handled by an RBI-authorised payment provider.

02 Payment network access
Connectivity to UPI, cards, net banking and wallets.

03 Secure settlement
Funds settle directly to each merchant's bank account.

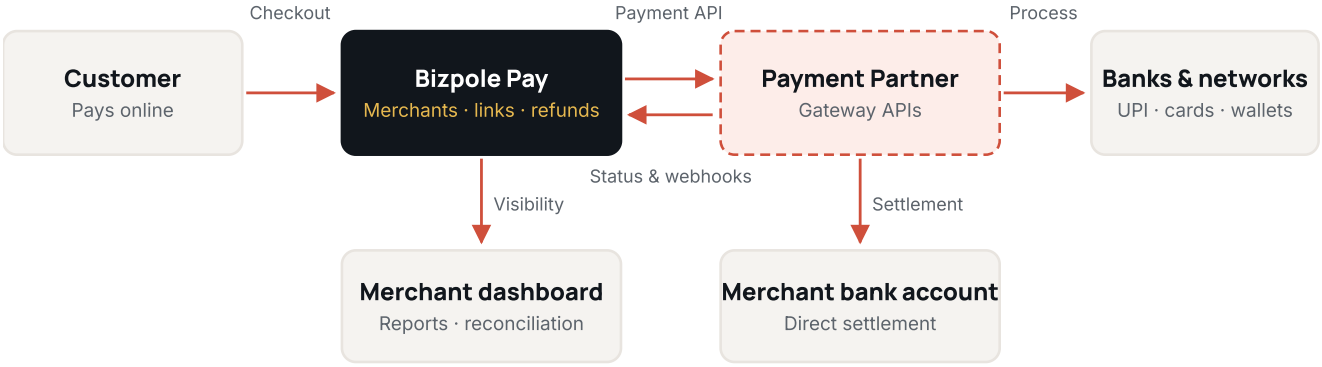

04 Security & compliance
PCI DSS-compliant processing, tokenisation and merchant KYC.

PRODUCT WORKFLOW

How Bizpole Pay will work

03

Bizpole Pay manages the payment experience, tracking and reporting. Our payment partner provides the payment processing, notifications and settlement underneath it.

STAGE	BIZPOLE PAY HANDLES	WE NEED FROM OUR PAYMENT PARTNER
Checkout & orders	Payment order creation from our platform	Payment API access and secure authentication
Payment processing	The customer payment experience	Processing across UPI, cards, net banking and wallets
Status tracking	Tracking successful, failed and pending payments	Status verification APIs and webhook notifications
Refunds	Refund requests and status updates for merchants	Refund APIs and refund settlement
Settlement	Settlement monitoring and reconciliation	Settlement cycle, reports and status APIs
Merchant view	Merchant-wise transactions and settlements in one branded interface	Merchant-wise transaction and settlement data

Merchant account ownership

- Each merchant completes its own KYC and holds its own merchant or sub-merchant account with the payment partner.
- Each merchant settles to its own verified bank account.
- Bizpole Pay provides the platform and interface; it does not own merchants' payment accounts.

Fund flow

- Customer payments are processed by the payment partner.
- Funds settle from the payment partner directly to each merchant's bank account.
- Bizpole Pay does not hold, pool or route merchant funds.
- Refunds and adjustments are applied against the respective merchant.

To clarify: We would like our payment partner to confirm this structure, KYC responsibilities for each merchant, how refunds and chargebacks are adjusted per merchant, and how a Bizpole Pay platform fee could be collected, if applicable.

INTEGRATION REQUIREMENTS

04

Required Payment Integration Modules & APIs

Our requirements fall into five modules. Together they cover onboarding, the full payment lifecycle, and the support needed to run payments reliably at scale.

A Business & Partner Onboarding

A clear, well-supported path from registration to live credentials.

- Register Bizpole Pay as a business or technology partner
- Complete company KYC and documentation
- Receive sandbox & production API credentials
- Understand the applicable partner onboarding process
- Obtain the appropriate merchant or partner account

B Payment Partner Integration

Full API coverage of the payment lifecycle.

- Payment API access
- Payment status verification
- Refund API integration
- Transaction reporting
- Secure API authentication
- Payment order creation
- Authorisation and capture, where supported
- Webhook notifications
- Merchant-wise transaction visibility

C Payment Methods

Support and commercial details for each applicable method.

- UPI
- Debit cards
- Wallets
- Credit cards
- Net banking
- Other supported payment methods

D Settlement & Reconciliation

Clear visibility of money movement, end to end.

- Settlement cycle and timelines
- Settlement reports
- Refund settlement handling
- Settlement status APIs or reports
- Merchant-wise settlement tracking
- Transaction-level reconciliation
- Failed and disputed transaction management

E Technical Support

Dependable support through integration and after launch.

- Technical integration documentation
- Sandbox testing assistance
- Technical escalation contact
- Dedicated integration support
- Production activation support
- Defined support and issue-resolution SLAs

SECURITY & COMPLIANCE

Protecting payment data

05

Bizpole Pay is being designed to keep sensitive payment data within our payment partner's secure environment and to meet applicable RBI requirements. We would value our partner's guidance on the obligations that apply to us.

Our intended approach

- Card details are entered on the payment partner's hosted checkout or secure SDK, not on Bizpole Pay systems.
- Bizpole Pay does not intend to store, process or transmit full card data, reducing our PCI DSS scope.
- Saved cards, if offered, rely on the partner's RBI-compliant card tokenisation.
- Payment data is stored in India, in line with RBI's payment data storage requirements.
- APIs secured with encrypted connections, secure credentials and webhook signature verification.

Guidance we request

- Our PCI DSS obligations under the recommended integration, and the documents required.
- Applicable RBI guidelines for a multi-merchant platform, including merchant due diligence.
- Data storage and data sharing requirements for transaction and merchant data.
- Security reviews, questionnaires or audits required before go-live.

PARTNERSHIP MODEL

Which model best suits Bizpole Pay?

06

Bizpole Pay will onboard and serve multiple merchants. We request our payment partner to recommend the most appropriate model for onboarding multiple merchants, including its regulatory implications, KYC responsibilities and the onboarding path that follows.

A **Direct merchant**
Bizpole Pay is onboarded as a single merchant account.

B **Technology partner**
Bizpole Pay integrates the partner's payment stack as an integration partner.

C **Platform partner**
Bizpole Pay onboards and manages its merchants as sub-merchants through the partner's onboarding APIs.

D **Aggregator arrangement**
Payments for several merchants are handled through Bizpole Pay. We recognise this carries regulatory requirements and would value guidance.

EXPECTED STRATEGIC PARTNERSHIP

What we hope to build together

07

01
Onboarding assistance
Guidance through business registration and onboarding.

02
API access
Access to the relevant merchant or partner payment APIs.

03
Competitive commercials
Fair transaction pricing and commercial terms.

04
Integration support
A dedicated technical contact during integration.

05
Sandbox & production
Timely access to both environments.

06
Compliance guidance
Help with compliance requirements and documentation.

07
Settlement support
Support for settlement and reconciliation operations.

08
Strategic collaboration
A relationship built for the long term.

09
Shared growth
Ongoing discussion of new opportunities and transaction growth.

IMPLEMENTATION ROADMAP

Four phases from onboarding to growth

08

01
Business Onboarding
Company verification, documentation and partner registration.

Partnership model agreed · KYC & documentation · Account set-up

02
API & Technical Integration
Sandbox access, API credentials, payment flows and webhooks.

Sandbox credentials · Payment & refund flows · Webhook handling

03
Testing & Certification
End-to-end testing, verification and production approval.

Transaction & refund tests · Reconciliation checks · Go-live approval

04
Production Launch & Growth
Live processing, monitoring and long-term partnership.

Live transactions · Settlement operations · Growth reviews

Timelines for each phase to be agreed jointly with our payment partner.

COMMERCIAL DISCUSSION

Information we would like to receive

09

We have not assumed any pricing. We request **separate pricing for each payment method and service** listed below.

#	PAYMENT METHOD / SERVICE	PRICING REQUESTED	PARTNER RESPONSE
PAYMENT METHODS — TRANSACTION PRICING (MDR)			
01	**UPI**	Transaction pricing for UPI payments	
02	**Debit cards**	Domestic debit card pricing	
03	**Credit cards**	Domestic credit card pricing	
04	**International cards**	International card pricing, if applicable	
05	**Net banking**	Net banking pricing	
06	**Wallets**	Wallet pricing	
07	**Other methods**	Pricing for any other supported payment methods	
SERVICES			
08	**Setup & onboarding**	One-time setup, onboarding or integration charges	
09	**Merchant onboarding**	Charges per merchant onboarded, if any	
10	**Payment links**	Charges for payment links, if priced separately	
11	**Refunds**	Refund processing charges	
12	**Settlement**	Standard settlement and faster settlement charges	
COMMERCIAL TERMS			
13	**Minimum commitment**	Minimum monthly commitments, if any	
14	**Volume-based pricing**	Pricing tiers linked to transaction volume	
15	**Partner benefits**	Any additional partner benefits or programmes	

FIRST MEETING

10

Proposed discussion points

01 The recommended model for onboarding multiple merchants

02 Security and compliance requirements

03 Business onboarding requirements and documentation

04 API access and the integration process

05 Commercial pricing

06 Settlement cycle

07 A dedicated relationship manager

08 Expected integration and activation timeline

SUMMARY
